

# Sharper Minds® Guided Training System

For over two decades, the Sharper Minds® mental skills training program has proven to produce outstanding (crazy good) results for adults or children who need help in

- overcoming attention, learning or behavioral related issues (such as dyslexia or ADD/ADHD), head trauma and other cognitive issues,
- for those who would benefit from superb mental performance (who desire scholarships, to be a valedictorian, hold an executive position, athletes, etc.) or
- for the elderly wishing to fend off Alzheimer's and keep their minds sharp.

Reading skills, math skills, listening skills, memory, social skills, hand-eye coordination, academic and work performance, brain processing speed and athletic skills have dramatically improved in most of our clients. Even amateur and professional athletes as well as the elderly have observed substantial improvements in quickness and mental acuity. We have even worked with an autistic 6-year-old who has since shed the diagnosis, become a commercial pilot for American Eagle Airlines and happily married.

Years of research and development have proven that robust mental skills development requires **physical movement of the major muscle groups in conjunction with stimuli from multiple senses** (sight, hearing, touch, balance, muscle feedback, etc.). The purpose of the Sharper Minds program is to improve thinking abilities by encouraging the brain to create new neurological pathways so that the brain can do things competently (like reading, listening or math) without substantial effort. We call this **automaticity**. These neurological pathways take time to develop, so repetitive reinforcement over an extended period is essential for developmental success. Therefore, the exercises were designed not only to be effective, but also reasonably fun. As the brain develops through applying the program's exercises, attention, learning or behavioral related issues (such as dyslexia or ADD/ADHD) are often minimized or eliminated.

## ***Proven Track Record***

The Sharper Minds Guided Training System ("GTS") consists of the same materials and equipment options as our former in-office program and has been proven in application via fully guided phone sessions with our clients since 2008, so distance need not matter. (**We have worked with clients from nearly 30 states, Canada and the Caribbean**). Most of the testimonials, case studies and reading improvement graphs you may have seen are based upon this Guided Training System in which you and your family is guided step-by-step through the brain development exercises of the program.

The program's goal is to help the individual develop competency and even automaticity in a variety of mental skills. The Guided Training System options contain the equipment and exercise instructions necessary to stimulate and help develop the following:

- The **visual cortex** and the related **reading cortex** including visual input, analysis and visual memory. The exercises help develop visual memory skills (even photographic memory in some cases) and will improve eyesight tracking. This helps improve visual processing speed, reading speed, comprehension, spelling, punctuation, and other work-related skills.
- The **balance or vestibular system** which provides the foundation for movement, coordination and (interestingly enough) reading.
- The development of the **corpus callosum** which is a bundle of nerves that connects the upper hemispheres of the brain. It generally develops from the rear of the brain forward and is often inadequately developed, leaving the individual to operate predominantly in right brain mode (as the right brain typically develops first). Children whose corpus callosum hasn't developed as far forward or robustly as it should are

often impulsive, hyper emotional, lack self-control or may be slow cognitively. Developing the corpus callosum forward and more robustly (we call it the Einstein Effect) promotes connectivity between the prefrontal cortices, allowing the rational/logical left prefrontal cortex to better balance the emotional right prefrontal cortex. Developing this improves brain processing speed allowing the brain to operate more efficiently and thereby in greater biochemical balance reducing stress, depression, and anxiety. This helps reduce dependency on psychostimulant or antidepressant medications.

- The **sensory-motor cortex** including gross motor skills and fine motor skills. Developing fine motor skills/graphomotor skills allow for faster handwriting with greater clarity. Developing gross motor skills improves coordination, balance, reaction speed, and athletic ability.

## Optional Modules

- **Auditory Module:** (Included in Ultimate Guided Training Systems). An **Auditory Module** proven over 25 years to help develop the **auditory cortex** including auditory input, analysis and auditory memory. This helps improve listening ability, reduces misunderstandings and improved auditory memory including remembering multiple instructions. Approx. 80% of those with processing difficulties have auditory processing issues. **This Module is an Online program through Advanced Brain Technologies.** For simplicity, users register and pay for that Module through ABT's website <https://advancedbrain.com/tlp-checkout/>. Listening can be done via a cell phone app or via an online portal. Sharper Minds referral code is: **mdyyzwr**.
- **Detox Module:** If the individual is dealing with True ADHD (hyperactivity, impulsivity, emotional volatility), Autistic Spectrum Disorder (ASD), tics, seizures, or has celiac disease (a gluten, casein intolerance), then our detox module is imperative. Our **Detox module** rapidly and safely removes most toxins from the body including heavy metals such as mercury, lead, aluminum, tin and arsenic, and toxic chemicals including pesticides and herbicides. Helpful for removing barriers to brain development and optimizing brain development results. Families have reported very quick and noticeable reductions in severe hyperactivity and emotional volatility **if** these issues are caused or exacerbated by neurotoxins. Generally, it will also **improve immune system function, and reduce the likelihood of cancer and other diseases.** It may also reduce or eliminate seizures or tics in individuals with Autistic Spectrum Disorders and Tourette's Syndrome.

A key to the Guided Training Systems is **the personalized one-on-one phone calls** that take place between the Sharper Minds trainer and the parent, coach or solo adult **twice a month** over the course of the program. These will usually last about 30-60 minutes with the first two typically lasting 75-90 minutes (If face-to-face, they last 2-2.5 hours). These are intended for guiding the family, personalized explanation, clarification, encouragement, creating the right expectations, troubleshooting, hints and tips as well **as providing the assignment sheets for the next several weeks.** The assignment sheets are e-mailed to the client who then prints and records their time and progress on them (this is very important to facilitate proper monitoring). Just prior to the phone call, the client scans and emails to their Sharper Minds trainer their filled-out assignment sheets, spelling and handwriting sheets (as applicable). These form the basis for each phone session after which a new assignment sheet is provided.

To assist the phone sessions, the instructional materials include step-by-step videos, a detailed manual that contains photographs and step-by-step instructions, and the forms and charts that the student will need to do the program. Some videos, audio recordings

and forms are provided in digital format on a USB drive. Other forms, tips and guidance will be emailed to the family as needed by the family's Sharper Minds trainer.

We include the specialized equipment necessary to do the exercises of the program. The few things the families will need to provide are **pencils, erasers, paper, access to a computer with working printer, email**, and some method for returning the progress/time/ work sheets. This may include a scanner (use the free NAPS2 scanner software), or a scan-to-pdf app that allows a SmartPhone to make pdf files of the sheets to be sent.

**Which Program Option is best for you?**

Ask your potential trainer for their recommendations as to which Guided Training System would best suit your student's needs. More options are on the next page.

**Guided Training Systems** (all amounts are in US dollars) \*

We recently implemented a straight-forward fee structure for the Sharper Minds program. The initial fee covers the equipment for the Program Option selected, any desired add-ons and the charge for the first month's services. This is followed by a fixed monthly fee of \$185.00 on an ongoing basis for 2 phone sessions a month until the program is completed. These important sessions are customized to assist with training, understanding of the materials and keep the students on track, i.e., to guide the designated family members step-by-step through the entire program.

Time to complete the program ranges from 10.5 to 26 months with an avg. of 17 months (14-19 typical for those with consistency). The duration of the program depends on a variety of factors including how mentally challenged the primary child/individual is, how disciplined the parent guiding the program is and how well he or she can motivate the children to do the exercises consistently and others.

*	Description
\$995.00	<b>Basic Guided Training System (GTS).</b> Includes instructional manual with photographs and materials, charts & forms, and <b>two sets of the basic program equipment for simultaneous use by two specified children/individuals.</b> Valid for two children/individuals.
\$200.00	<b>Additional children/individual fee</b> (beyond the two included above)
\$1395.00	<b>Premium (includes Basic + Detox Module for two people)</b>
\$100.00	<b>Detox Module Add-on</b> (for one adult or two younger children)
\$1,525.00 + monthly or annual TLP Online subscription fee	<b>Ultimate Guided Training System.</b> Includes the <b>Premium GTS plus an Auditory Module</b> (which consists of Advanced Brain Tech's Online Listening Program). Very effective for those with listening skill issues. <b>Includes the Premium Module and our Guarantee.</b>
\$185.00	<b>Monthly Charge for personalized guidance.</b> Charged in advance.
8.25%	<b>Sales Tax on taxable equipment. Required only</b> if the foregoing is purchased or picked up <b>in Texas.</b>
\$100-160.00	<b>Shipping (priority mail), insurance, and handling.</b> For USA clients, amount depends on shipping zone, weight of the package and insured value. For areas outside the USA, the S/H/I charge will be actual shipping / insurance costs plus \$25 for packaging and handling.

\*Amounts subject to change without notice. Fees shown are for guided GTS related services delivered by the primary Texas provider. Services by contracted providers outside of Texas will likely be at different (higher) rates. In-office and weekly program options have their own rates. Call for details.

If shipped, the box that the equipment comes in is relatively large, 36" L x 18" W x 5.5" H and weighs between 25-35 lbs. depending on the options chosen. The Basic GTS package generally ships within 2 days of the receipt of the order/clearance of the payment and is shipped by Priority Mail (postal service 3 business days (M-F) delivery). For expediting purposes, the Basic GTS, Auditory Module and Detox Module may ship separately at no additional charge. Call to check inventory and estimated ship dates.

**Forms of Payment:** For the initial payment, we accept check, Zelle, PayPal, Visa, MasterCard, AmEx and Discover credit, and Visa and MasterCard debit cards (be aware of potentially lower withdrawal limits on debit cards). We use **PayPal's subscription**

**feature** for the monthly automated recurring payments. If using PayPal poses an issue for you, please let us know.

If you are local to the Dallas-Fort Worth, Texas area and had an evaluation at your home, the first two training sessions are done at your home. **We like to do business face to face, and value relationships.**

To discuss your situation and determine which program option would be best for your family, **call first:** toll free at 1-866-HELP-A.D.D. (1-866-435-7233). Please leave a message if voicemail should pick up.

### **An absolute bargain with a great return on investment**

When the founders began working with their children through a program in 1997, they paid \$5,000 for a yearlong program which, though very good, did not include a number of the significant components of the Sharper Minds program. That would be about \$9,492 in today's (2024) dollars, the closest being our Basic Program which is broader spectrum and much more effective. In 2004, for a Sharper Minds in-office program without the detox option, the charge was \$6,255 or \$10,089<sup>1</sup> in today's dollars. Thus our top program **which covers two family members** is a bargain. The more persistent and consistent the family is in doing the exercises, the faster they complete the program and the less the overall cost.

The savings in emotional capital, in not needing tutoring or specialty schools, and the scholarships most of our students qualify for (in 2021 we saw scholarship certificates for \$26,000 and \$30,000 for two of our program graduates), provide multiple returns on the investment. And a dollar saved is worth much more than a dollar earned.

### **Guarantee on the Ultimate Training System**

Having worked with families and individuals since 1999 and based upon our high success rate, we have every confidence that you will see notable improvements as well. To the best of our knowledge, the **Sharper Minds Ultimate Training System** deals with more issues and thus improves more areas of the brain than any other program currently available. The program and its subsets have been proven in use with thousands of children, adults and seniors.

We are so confident, that Sharper Minds guarantees the effectiveness of its **Ultimate Guided Training Systems** and their exercises and components in improving brain processing speed, reading, focus, memory, behavior, listening, academic and work performance and general mental processing capabilities.

Therefore, if you do the **Ultimate Guided Training program** in good faith, following the instructions and doing the assignments as provided to you by your Sharper Minds trainer, doing all the exercises and completing the program as facilitated, and you or your student is still dealing with the same issues that you came to us for, than we offer a 50% money-back Guarantee. Certain reasonable restrictions and limitations apply.

---

<sup>1</sup> <https://www.usinflationcalculator.com/>

If you have any questions or need details pertaining to this guarantee, please call Sharper Minds toll free at 1-866-HELP-A.D.D. (1-866-435-7233).

### ***References and Closing Thoughts***

A number of families are happy to act as references for us. We can provide you with their contact information, providing that this is your last step prior to beginning the program. Please have your finances in order prior to requesting the references.

Doing the program and completing it successfully requires that the coaching parent be teachable, personable, able to follow straightforward instructions and not be demanding. Proper record keeping and setting up the recurring payments according to a Services agreement are two of the best indicators of the ability to follow instructions, compliance, ongoing consistency and persistency in doing the exercises.

We are very much into relationship building with each family or individual we work with. We want to spend quality time in a mutually friendly, polite and respectful manner with each other. We will be working together for your family's good over the next 16-20 or more months and ask that you be as committed to your success as we are known to be.

We look forward to working with you,

The staff at Sharper Minds
